

# Fighting to Survive: PAHs in the Stormy Cosmos

**Elisabetta R. Micelotta**

CRESST/USRA/NASA Goddard Space Flight Center

**A. Tielens** (Leiden Observatory, The Netherlands)

**A. Jones** (IAS Orsay, France)

**PAH collisional processing is missing!!!**

**Physics  
of PAH collisional processing:  
Molecular target → SPECIFIC MODELS**

**Astrophysical implications  
of PAH collisional processing**

# PAH collisions with ions/electrons

Energy transfer

Nuclear

Electronic

$T_0 = 7.5 \text{ eV}$   
C ejection

$E_0 = 4.6 \text{ eV}$   
 $\text{C}_2$  ejection

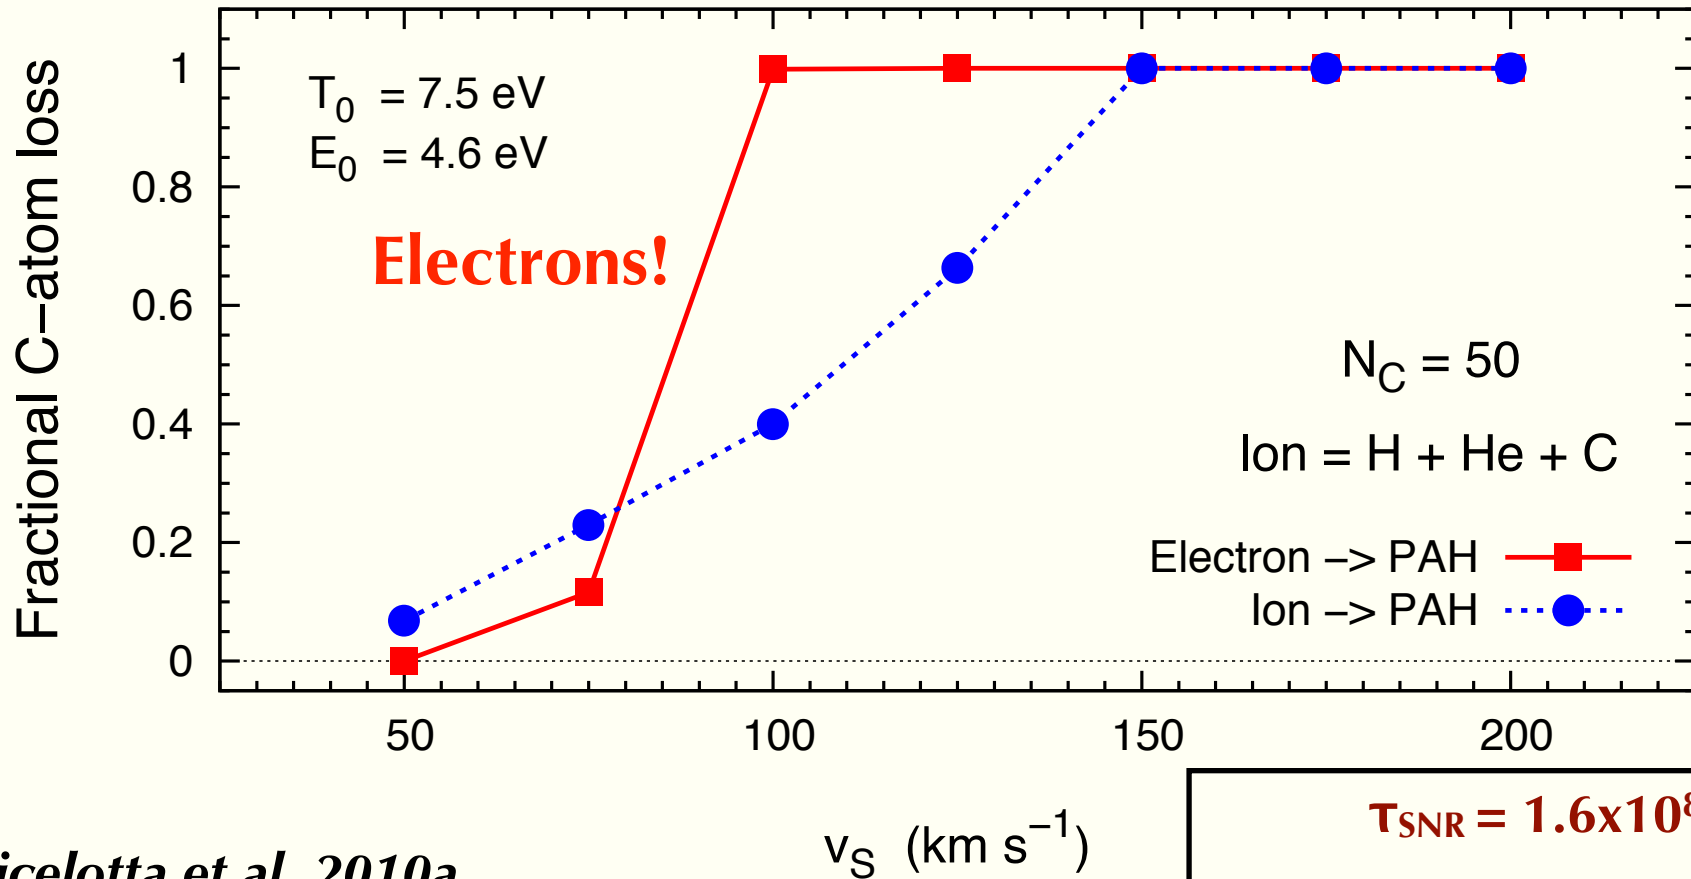

Cross section  
+  
convolution

Dissociation  
probability  
+  
convolution

Number ejected C-atoms  $\rightarrow$  PAH destruction level

# Interstellar Shocks:

Inertial motion:  $E = 10 \text{ eV} - 10 \text{ keV}$   
Thermal motion:  $E = 5 - 50 \text{ eV}$

Micelotta et al. 2010a

$\tau_{\text{SNR}} = 1.6 \times 10^8 \text{ yr}$   
 $\tau_{\text{grains}} = 6 \times 10^8 \text{ yr}, \tau_{\text{inj}} = 2.5 \times 10^9 \text{ yr},$   
Jones 1996

**Protection and/or reformation required**

# PAH evolution

Random removal of carbon atoms

$N_c(\text{lost}) = 2$

$N_c(\text{lost}) = 10$

$N_c(\text{lost}) = 21$

$N_c(\text{lost}) = 29$

$V_{\text{shock}} = 50$

75

100

125 km/s

$N_c(\text{lost}) = 2$

$N_c(\text{lost}) = 10$

$N_c(\text{lost}) = 20$

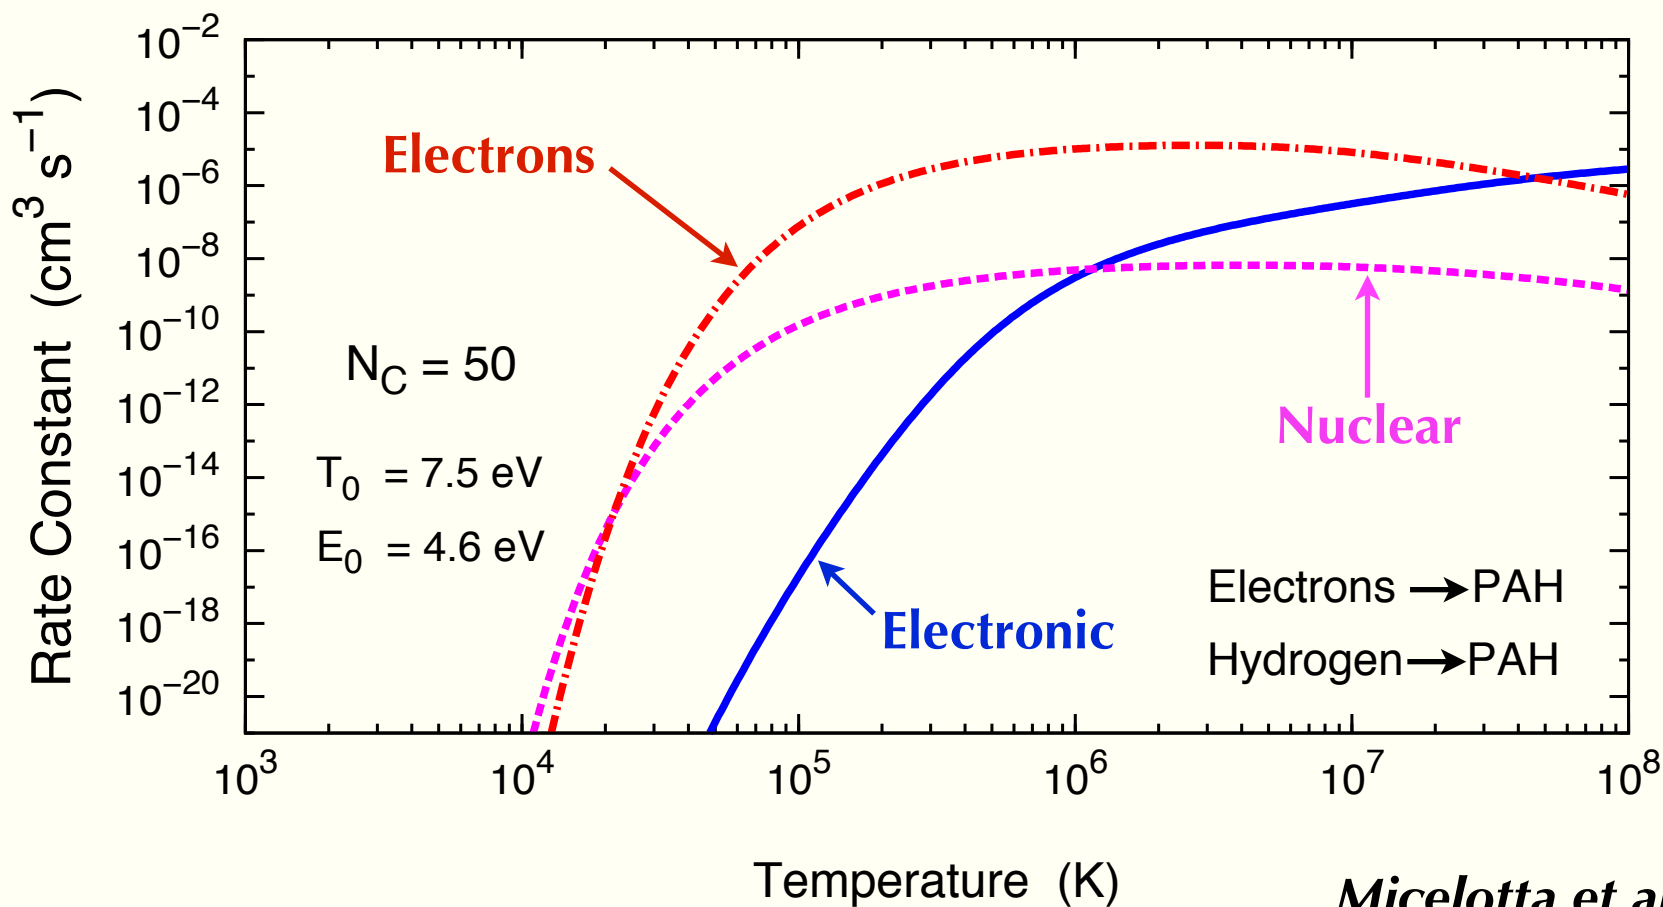

$N_c(\text{lost}) = 30$

Minimal aromatic domain loss

# Hot Gas:

Temperature of gas:  $T = 10^5 - 10^8$  K

Thermal motion:  $E = 10$  eV - 10 keV

(Rate constant) x density = ejection rate

**Red** = Spitzer IRAC 8.0  $\mu\text{m}$   
**Green/Orange** = optical  
**Blue** = Chandra.

$\tau_0 =$   
 $N_c / \text{ejection rate} =$   
**PAH lifetime**

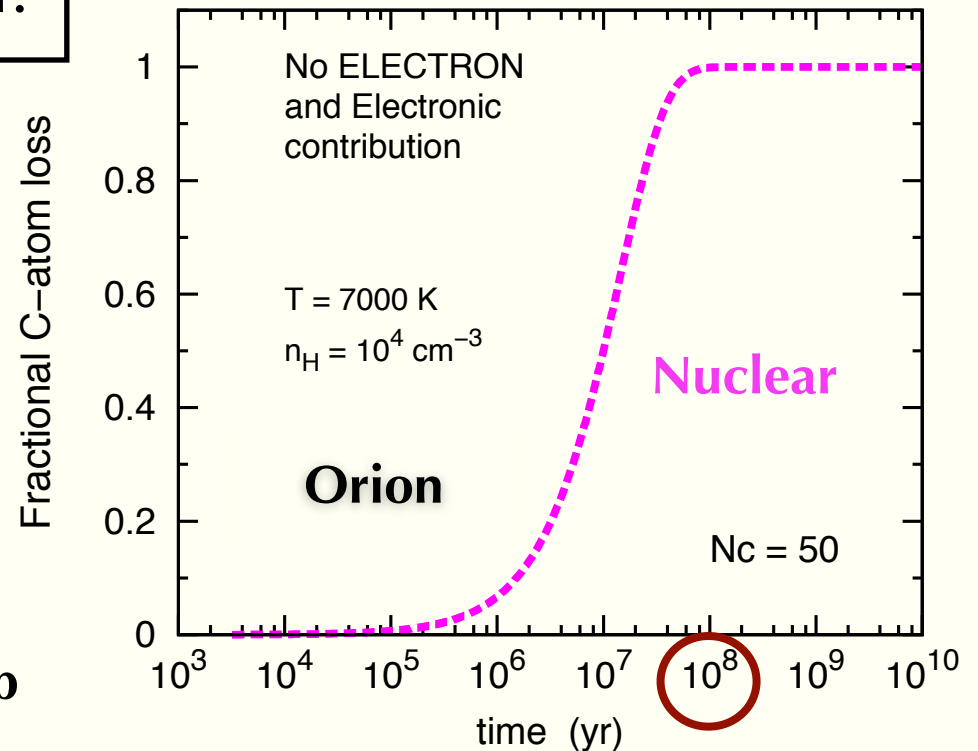

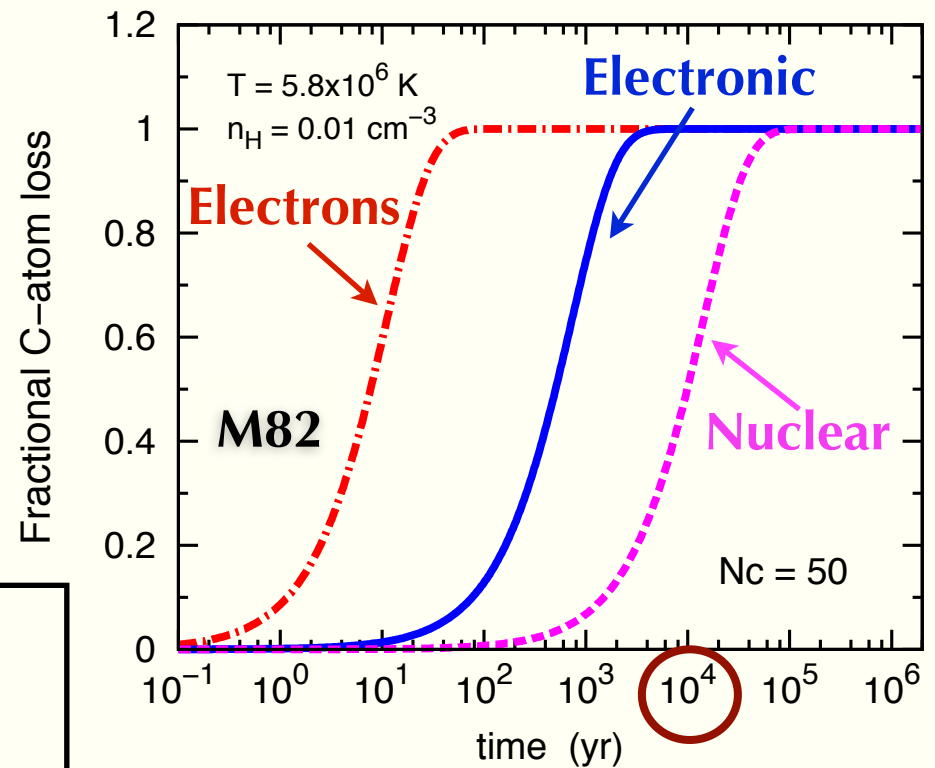

**M82:  $\tau_0 = 10 \text{ yr}$ ,  $\tau_{\text{obj}} = 20 \text{ Myr}$ .**

**Orion:  $\tau_0 = 10 \text{ Myr}$ ,  $\tau_{\text{obj}} = 1 \text{ Myr}$ .**

Uncertainty  $\sim$  factor 10

**PAH entrained in cold material**

Micelotta et al. 2010b

# PAH lifetime: solar neighborhood

Cosmic Rays:  $E = 5$  MeV - 10 GeV

# PAH lifetime: galactic wind

**Cosmic Rays:  $E = 5$  MeV - 10 GeV**

# Physics of collisional processing

$N_c = 50$  C-atoms  
 $v_s < 100$  km/s  
**denaturation**

$N_c = 50$  C-atoms  
 $v_s \geq 100$  km/s & hot gas  
**complete destruction by  
thermal electrons**

**Cosmic Rays**  
destruction by  
**inelastic coll. with ions**

# Astrophysical implications

Inter-cloud ISM

**Small PAHs**

destruction by **Cosmic Rays**

Inter-cloud ISM

**Larger PAHs**

destruction by **shocks**

**Protected PAHs**

lifetime set by

**Cosmic Rays & X-rays**

$$\tau_{\text{PAH}} < \tau_{\text{inj}}$$

**Re-formation mechanism required**

**Which one?**

# Perspectives

PAHs in the ISM: **origin?**

From PAHs to grains: **filling the gap**
