

Grid PRF (Dphot) Photometry for WISE, David G. Elliott, JPL, delliott3@charter.net. This plot shows stars measured from WISE W1 (3.4 μm) images of the Galactic Center. North is up, East is left, and the origin is at Sgr A. *Dphot* fits arrays of PRFs on 2 arcsec spacings to the 13 overlapping WISE images of this area. Positive fits give the source detections shown here.
